### Bale Specification for Tissue Grades

Following a recent Health and Safety review and in line with our on-going commitment to improve productivity, we would like to reaffirm our requirements with regard to bale quality.

Each bale loaded should be to the following specification:

- No less than 450kg, no more than 1200kg
- Not more than 1.5m in length
- No less than 4 wires
- No galvanised or stainless steel wires
- Consistently sized
- Solid enough to be mechanically handled several times
- No protruding wires

Cross wired, shrink wrapped or bales on pallets will not be accepted.

Each load will be carefully inspected on arrival at the mill and any non-conforming bales may result in the rejection of the load in its entirety.

Thank you in advance for your cooperation, if you have any queries please do not hesitate to contact us.

Yours sincerely

Brian Bingham
