

HIGHLANDER INTERNATIONAL RECYCLING

At the peak of paper recycling

ECO RECYCLING SERVICE

INCEPTION 2002

Highlander International Recycling was founded in 2002 and from our initial inception of Recovered materials Brokers, we have now evolved to include Paper Recycling, Reel Splitting, Document and Product Destruction and Waste Recycling Consultancy. Our change of strategy reflects the requirement for a bona fide Independent, reliable and professional Recovered Paper recycler for the Central Scotland area.

In April 2014, Highlander made a long-term commitment with the purchase of our head office in East Kilbride. This acquisition of a 60,000 sq ft purpose built Waste Paper Recycling Centre, (formerly owned by J.W. Hannay & Co) is now our main recovered paper recycling facility. Highlander International Recycling is now the largest independent recovered paper recycler in Scotland, recycling over 25,000 tons of recovered paper per annum through our Paper Recycling operation and a further 100,000 tons per annum through our trading arm, diligently serving customers throughout Scotland, Ireland and the United Kingdom for over a decade.

Material Processing:

Highlander has invested heavily in modern, efficient and safe processing machinery and our asset base includes 2 modern fully automatic baling machines;

1 x **Imabe H100 horizontal baling press** with capacity of 400 tons per week and;

1 x **Lindemann Bigro 120 horizontal baling press** with capacity of 500 tons per week.

This gives our total Baling Capacity at almost 1000 tons per week – the largest recovered paper baling capacity utilised by an independent paper recycling company in Scotland!

Reel Splitting Guillotine:

We operate the most comprehensive reel handling, splitting and recycling system in Scotland – utilising a 50 ton BOA reel splitter capable of quickly splitting reels of up to 3.5 tons in mass, 2.7 meters high and 2.2 meters in diameter, within 3 minutes.

Woodmizer Saw Mill:

To complement our reel splitting operation, we have invested in a Woodmizer Saw mill to cut reel ends quickly and safely. Originally designed to cut logs, we made some unique modifications including changes to the reel retention system and changes to the types of blade, our plant will now handle and process reels with a much smaller diameter, as well as cut reel ends of various sizes. We are confident that with our unique range of reel processing equipment, we are able to offer an unrivalled service within this sector and are able to handle a wide range of waste reel products such as wood-free printed or unprinted reels, newsprint reels, paper reels related to the packaging industry (Kraft, test-liner and fluting), as well as tissue reels.

Hammer Mill Shredder:

Our Hammer mill shredder has a capacity of up to 7 tons per hour, making it the largest paper shredding machine operating in Scotland today! With this capability, we are able to destroy a wide range of items at high speed and throughput, allowing us to offer comprehensive product and document destruction services for a wide range of customers.
